Assignment

Assignment No. – 04

Submission date- 28 November, 2021

Course Title- Data Structure (Theory)

Course Code: CSE-2322

Submited to-

Mohammed Shamsul Alam

Professor, Dept. of CSE, IIUC.

Cell: 01711941680, alam_cse@yahoo.com

Submitted by-

MD. SOROWAR MAHABUB RABBY

Matric ID: ***C201032***, Section: ***3AM*** , Semester: ***3rd***

Department of CSE (*Computer Science and Engineering*), IIUC

Cell: *01834756433, 01521564157, c201032@ugrad.iiuc.ac.bd*

Problem No. & Statement	1. Write a program to sort n numbers using Insertion Sort algorithm.

```
/*                          Author: Sorowar Mahabub
                    ID: C201032, Section: 3AM, CSE, IIUC                    */

#include<iostream>
//#include<bits/stdc++.h>
using namespace std;

int Array[201032],N;

void InsertionSort()
{
    int ptr,k,temp;

    Array[0]= -201032; //will be Infinity

    for(int k=2 ; k<=N; k++)
    {
        temp=Array[k];
        ptr=k-1;
        while(temp<Array[ptr])
        {
            Array[ptr+1]=Array[ptr];
            ptr--;
        }
        Array[ptr+1]=temp;
    }
}
// Author: Sorowar Mahabub, C201032

void DISPLAY()
{
    cout << endl;
    for(int i=1; i<=N; i++)
        cout<<Array[i]<<" ";
    cout << endl;
}

int main()
{
    cout<<"How many Elements: ";
    cin>>N;

    cout<<"Enter Elements: ";
```

```
    for(int i=1; i<=N; i++)
        cin>>Array[i];

    InsertionSort();
    DISPLAY();
    return 0;
}
```

Problem No. & Statement	*2. Write a program to sort n numbers using Selection Sort algorithm.*

```
/*                          Author: Sorowar Mahabub
                    ID: C201032, Section: 3AM, CSE, IIUC                    */

//#include <bits/stdc++.h>

#include<iostream>
using namespace std;

void SelectionSort(int *array, int size)
{
    int i, j, imin;
    for(i = 0; i<size-1; i++)
    {
        imin = i;
        for(j = i+1; j<size; j++)
            if(array[j] < array[imin])
                imin = j;

        int temp;
        temp = array[i];
        array[i] = array[imin];
        array[imin]= temp;

    }
}

int main()
{
    int n;
    cout << "Enter How many elements: ";
    cin >> n;
    int arr[n+32];
```

```
    cout << "Enter your elements: ";
    for(int i= 0; i<n; i++)
        cin >> arr[i];

    //Author: Sorowar Mahabub,  C201032

    cout << endl;
    cout << "Array is Sorted & sorted elements are: ";
    SelectionSort(arr, n);

    for(int i= 0; i<n; i++)
        cout << arr[i] << " ";
    cout << endl;

    return 0;
}
```

Problem No. & Statement	3. Write a program to sort n numbers using Quick Sort algorithm.

```
/*                          Author: Sorowar Mahabub
                    ID: C201032, Section: 3AM, CSE, IIUC                    */

#include<iostream>
//#include<bits/stdc++.h>
using namespace std;

int compareTo(const void* first, const void* second)
{
    int* x = (int*) first;
    int* y = (int*) second;

    if (*x > *y)
    {
        return +1;
    }
    else if (*x < *y)
    {
        return -1;
    }
    else
    {
        return 0;
    }
}
```

```
// Author: Sorowar Mahabub,  C201032
int main()
{
    int A[201032],N;

    cout<<"How many elements?: ";
    cin>>N;

    cout<<"Enter the array elements: ";
    for(int i=0; i<N; i++)
        cin>>A[i];

    qsort(A,N,sizeof(int),compareTo);

    cout << endl << "After sorting: ";
    for (int i=0; i<N; i++)
        cout << A[i] << "  ";

    return 0;
}
```

Problem No. & Statement	***4. Write a program to merge two sorted list.***

```
/*                          Author: Sorowar Mahabub
                    ID: C201032, Section: 3AM, CSE, IIUC                    */

#include<iostream>
//#include<bits/stdc++.h>
using namespace std;

int A[1000], B[1000],C[1000000],N,R,S;

void display();
void MergingSort()

/*
Double hashing can be done using :
(hash1(key) + i * hash2(key)) % TABLE_SIZE

Here hash1() and hash2() are hash functions
and TABLE_SIZE is size of hash table.
(We repeat by increasing i when collision occurs)

First hash function is typically
    hash1(key) = key % TABLE_SIZE

A popular second hash function is :
    hash2(key) = PRIME - (key % PRIME)
where PRIME is a prime smaller
                than the TABLE_SIZE.
